

### 3.8 LAB

Complete this lab as follows:

1. Log in to the Cisco switch.
  1. Maximize the Google Chrome window for better viewing.
  2. In the Username and Password fields, enter **cisco** (case-sensitive).
  3. Select **Log In**.
2. Set the Power over Ethernet (PoE) switch properties.
  1. From the left pane, expand and select **Port Management > PoE > Properties**.
  2. Select **Class Limit**.
  3. Select **Apply**.
  4. From the top right, select **Questions**.
  5. Answer the questions.
  6. Minimize the Lab Questions dialog.
3. Configure the PoE priority for port GE23 to be Critical.
  1. From the left pane, under PoE, select **Settings**.
  2. From the right pane, select port **GE23** and click **Edit**.
  3. For *Power Priority Level*, select **Critical**.
  4. Select **Apply**.
  5. Select **Close**.
4. Save the changes to the switch's startup configuration file.
  1. From the upper right of the switch window, select **Save**.
  2. For *Source File Name*, make sure **Running configuration** is selected.
  3. For *Destination File Name*, make sure **Startup configuration** is selected.
  4. Select **Apply**.
  5. Select **OK**.
  6. Select **Done**.
