

## 4.10 LAB

Complete this lab as follows:

1. Access the Network Connections window.
  1. Right-click **Start** and then select **Settings**.
  2. Select **Network & Internet**.
  3. From the right pane, select **Change adapter options**.
2. Configure the external vEthernet network adapter.
  1. Right-click the **vEthernet (external)** adapter and select **Properties**.
  2. Select **Internet Protocol Version 6 (TCP/IPv6)**.
  3. Select **Properties**.
  4. Select **Use the following IPv6 address** and configure the settings as follows:
    - IPv6 address: **2620:14F0:45EA:0001:192:168:0:10**
    - Subnet prefix length: **64**
  5. Select **OK**.
  6. Select **Close**.
3. Verify the IPv6 address.
  1. Right-click **Start** and select **Windows PowerShell (Admin)** to verify the address configuration.
  2. At the prompt, type **ipconfig /all** and press **Enter** view the IPv6 Address.
